Program Description

Program Preview

This program provides students with a strong foundation in economic theory, and quantitative methods while preserving sufficient flexibility to specialize in their areas of interest. The core curriculum includes courses in microeconomic theory, in quantitative methods, and includes a set of qualifying examinations. Additional course work is required in areas of concentration which include: research and environmental economics, trade and development, public health economics, transportation economics, and an open area of concentration.

The open area can accommodate students' interests in applied economic policy, sustainable development, food and climate policy, and marine issues. The hallmark of the Applied Economics Graduate Program is the training of students to understand and utilize economic theories, principles, and methods to examine real-world problems with significant attention to data, institutions, and context.

Since faculty from across campus are members of the graduate faculty in Applied Economics and are potential research advisors, the Applied Economics Graduate Program allows students to work with faculty who most closely match their interests.
